REASONS FOR ALLOWANCE

- The following is an examiner's statement of reasons for allowance: The present invention is directed to a method and device for automatically correcting color defective areas in an image, wherein said defective color areas being recorded with a color spectrum deviating from the actual color spectrum of said areas without color defects. Each independent claim identifies the uniquely distinct feature, "for reducing a processing to the basic areas to identify at least one of borderlines and centers of the defective areas, while identifying whether the basic areas deemed to be defective are defective and creating a correction mask to correct a visual appearance of the defective area if a basic area has been identified to be defective". The closest prior art, Acker et al. (USPN 6,009,209), disclose for automatically editing a digital color image to remove discoloration of the image, known as a red eye effect, by parsing the discoloration into regions and re-coloring the area of the discoloration based on the attributes of the discoloration; while Wang et al. (USPN 6,278,491 B1), disclose for automatically detecting and reducing red-eye in a digital image; and Marni (USPN 6,285,410 B1), discloses for removal of flash artifacts from digital images, either singularly or in combination, fail to anticipate or render the above underlined limitation obvious.

- Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
